Political Benefits

What are the benefits of collaborative governance of wet tropics country?

The delivery of multiple benefits was investigated through a three and a half year co-research project involving Rainforest Aboriginal people, social scientists, spatial analysts, government and non -government organisations. The co-research found that Rainforest Aboriginal people face a complex set of social, economic and educational challenges that impede their initiatives. The results from collaborative governance are particularly important because through managing country, they have developed solutions to overcome these barriers and deliver benefits.

Collaborative governance of wet tropics country overcomes multiple barriers to deliver these multiple benefits!
